

MAaaS

MISSION APP AS A SERVICE

SOFTWARE AS A SERVICE

PACKAGES

APP STAGE

From ideation to production **within one year**. BrainGu developers will work side-by-side with Operators to deliver applications that meet your mission-critical needs. This hand-in-hand approach ensures modern and secure development of your application.

Applications Delivered On Demand to the Tactical Edge

There's nothing worse than building a custom SaaS solution and finding out it's difficult to use. We deliver custom DevSecOps software with a focus on exceptional User Experiences.

OUR DEVELOPMENT CYCLE

OR

FEATURE

Yearly commitment subscription paid either monthly, quarterly, or annually.

We work directly with Operators to evaluate the scope of their app and determine success criteria for the application to be developed. BrainGu experts are on-hand to help customers determine core/critical and additional features that will contribute to the development of the application.

SUCCESS STORIES

WIDOW

THE FUTURE OF MISSION PLANNING

Naval Aviation units embarked at sea and Air Force units based on land can plan collaboratively and in real time. WIDOW is the Official Air Combat Mission Planning app for the United States Air Force.

MAIZE

USAF COUNTER DISINFORMATION TOOL

A prototype dashboard and toolkit that utilizes machine learning and human intelligence to track and target threat narratives, MAIZE reduces the response timeline from **months to days**.

"Previously it would have taken years for a solution like WIDOW to make its way to the operators and, by then, the problem has changed or the wrong problem was addressed because there was never a vehicle for solutions to be tied to actual problems that operators struggle with."

— Maj. William "Ralphie" Short, USAF
